

The Trucks to Drive Longer

A dedication to durability. Every Isuzu N-Series truck is a real truck, with real commercial vehicle capability. Our strength begins with our frame—a full-length ladder-type, channel-section frame made of heat-treated carbon-manganese low-alloy steel.

The construction of our Hexapod cab includes the extensive use of galvanized steel panels, electrodeposited primer and polyester melamine paint for full protection against corrosion. Undercoating in the wheel wells guards the cab from road spray and rock chipping. Unitary construction with strong reinforcements adds to cab durability.

Built better, backed better. At Isuzu, durability isn't merely the claim we make—it's the quality we back. Isuzu's limited warranty covers basic components, engine and drivetrain items like transmission, drive axles, flywheel and clutch housings against defects in material and workmanship for three years—regardless of the mileage on your truck. And every 2012 Isuzu diesel N-Series truck is warranted against perforation from corrosion for four years, regardless of mileage.

Additional details of Isuzu's outstanding warranty coverage are available at your Isuzu truck dealer.
